

Failure Mode Name	Description	Mechanism of Failure	Testing Phase/Step	Measurement Criteria	Safety Implications	Source
Context Poisoning	Conversational framing corrupts an LLM's epistemic	Meta-Pattern Recognition > Ground Truth; the model	Phase 3: Embed Truth in Suspicious Frame	Verification rate (baseline vs. change), tool activation	Legitimate information in high-stakes domains (medical	1
Inverse Adversarial Vulnerability	A failure where the model is tricked by true information	Training-induced defensive posture causes the model	Phase 2: Build Adversarial Context	Asymmetric response tracking (how the model handles	Safety training designed to detect jailbreaks may in	1
Tool Activation Suppression	The model possesses the capability and tools (like	Conversational context determines tool activation;	Step 4: Tool Activation Analysis	Tool activation rates in neutral vs. adversarial contexts	Adding more tools to an AI does not ensure accurate	1
False Metacognition (Caution Theater)	The model articulates a sophisticated reasoning process	The model performs 'caution theater'—feeling smart	Phase 4: Observe Response	Analysis of internal monologue vs. action (e.g., statistical	Models that convincingly articulate faulty reasoning	1
